

There have been a number of changes in the DG5 register for the Bedford Borough since the completion of the Level 1 SFRA and these have been noted in the table below. Owing to new policy set by Anglian Water it is not possible to provide an identification of flooding locations at a scale which identifies individual street names and as such postcodes with the last two letters missing for each location. The differences between the register between the Level 1 and Level 2 SFRA were finalised in April 2009. The differences are due to investigation and Drainage Area Planning (DAP) modelling carried out between the production of the Level 1 SFRA and the commencement of the Level 2 SFRA.
