APPENDIX A Planned Development Sites APPENDIX B Maps APPENDIX C Trip Rates APPENDIX D Growth from Planned Developments

## 1 Introduction

- 1.1 This report documents the methodology that JMP Consultants Ltd (JMP) adopted for the preparation of the future year model forecasts for the modelling of Bedford Town Centre undertaken on behalf of Bedford Borough Council ('BBC').
- 1.2 The first stage was the creation of latent travel demand forecasts, representing the 'starting point' demand for a future year scenario prior to the application of the highway transport model.
- 1.3 The latent demand forecasts represent the changes brought about by car ownership changes, the effects of changes in land use and the changes in goods vehicles demand.
- 1.4 Consequently these forecasts do not take into account the changes in income as represented through future year values of time, monetary transport cost changes such as fuel and fare costs, or changes caused by the feedback of these effects.
- 1.5 Forecast land use scenarios have been generated for the following years:

Saturn: 2011, 2015, 2021 and 2032;

VISSIM: 2014, 2021 and 2032.

- 1.6 The remainder of this note is structured as follows:
  - Concepts and Methodology Providing an outline of the methodology together with a rationale for the underlying concepts and reasons behind the choice of the proposed methodology;
  - Trip Generation for Key Sites Detailing the methodology for the calculation of trip volumes for the key development sites, segmented by travel purpose and time of day;
  - Constraining to TEMPRO Detailing the proposed methodology for constraining to TEMPRO, in effect including all of the proposed developments and the background growth that is expected based on the DfT National Transport Model forecasts;
  - Trip Distribution for Key Sites Documenting the methodology for distributing the above trip
    ends across the potential travel opportunities in the model; and
  - Forecast Models Network Coding Providing an outline of the stages and order of work in creating the future year networks and public transport network coding.

## 2 Concepts and Methodology

### **Base Year**

- 2.1 The base year model for the Saturn forecasts is based on 2011 survey data as supplied by BBC.
- 2.2 The base year model for the VISSIM forecast is based on 2014 survey data and on the current network as of November 2014.

### **Future Years**

- 2.3 The formulation of the first forecast, the '**Do Minimum**' scenario, represents the 2015 base year and includes the build out of all of the new developments and highway schemes put in place since 2011. The latent travel demands are only related to committed schemes with funding in place, and the total growth due to committed developments is constrained to TEMPRO growth factors.
- 2.4 The scenario contains the following:

Figure 1 Do Minimum scenarios

- 2.5 The second requirement of the modelling assessment is to evaluate two further **Do Minimum** scenarios for both 2021 and 2032.
- 2.6 These scenarios include all additional development sites and proposed highway improvements together with the measures identified for the base models.
- 2.7 For all model zones, planning data supplied by BBC has been used to growth the base year trip matrix. These factored base matrices and key development area travel demands have been combined to form a travel pattern and then constrained to a total level of trip making in line with the DfT TEMPRO software for the forecast year.

# 3 Trip Generation for Developments

- 3.1 A development database has been constructed for all planned development sites. The development areas have been forecast through the standard transport assessment process to enable discrete analysis with the each development allocated to the appropriate zone.
- 3.2 For the development sites, a set of trip rates has been derived from a review of trip rates used for previous local development framework assessment work and Trip Rate Information Computer System (TRICS version 7.1.2) database. These derived trip rates have been applied to the planning data to yield a set of trips by journey purpose, mode and time period for inclusion in the trip distribution modelling.
- 3.3 This section of the report summarises the information currently available with regards to the development sites identified by Bedford Borough Council ('BBC'), which is presented in the tables in Appendix A.
- This information is used to generate three future year scenarios: 2015, 2021 and 2032. Each development will generate an associated number of vehicle trips in each scenario.

## **Sources of Information and Assumptions**

The various planning documents and sources of information are discussed in turn in this section. Where gaps in data have been identified, the assumptions made are stated.

#### Local Plan 2002

- 3.6 In the 2002 Local Plan, BBC identifies a series of Sites to be developed. These were summarised by Atkins in 2011 for their Bedford Borough Transport Model Forecasting Report, in which three future year scenarios were drafted for each development: 2011, 2021 and 2031.
- 3.7 The 2021 JMP scenario is assumed to remain the same as the Atkins one, and the 2032 scenario will be equal to the 2031. In order to generate a 2015 scenario, information was requested from BBC regarding the status of each development. For those sites for which this information was not available, the assumption made is for no build-out to take place by 2015.

### **Allocations and Designations Local Plan 2013**

- 3.8 In July 2013, BBC adopted the Allocations and Designations Local Plan, which identified sites for development to meet the borough's needs to 2021. This document only partly supersedes the 2002 Local Plan.
- 3.9 The gaps regarding the quantum of developments have been filled by confidential information supplied by BBC.
- 3.10 Some information regarding phasing up to 2032 has been provided by BBC. For those sites without phasing information, it has been assumed that the 2015 build-out is 0 and the 2021 build-out is the final size of the development.

#### **Bedford Town Centre Area Action Plan 2008**

3.11 In October 2008, BBC adopted the Bedford Town Centre Area Action Plan, as part of the Bedford Development Framework. This document outlines the policy framework required to deliver the town's sustainable growth up to 2021. 3.12 The document includes the completion date for each site, which has been used to quantify the build-out of each development for each scenario.

#### **Approved CPNJSs and planning applications**

- 3.13 Following the adoption of the Town Centre Area Action Plan, a series of town centre sites have been granted planning permission. In addition to these, several offices have been converted to residential units as part of the government-permitted developments (CPNJs).
- 3.14 The information presented in this section of **Appendix A** has been provided by BBC. Very few of the sites have information regarding the time-scale of the development. Where no information is available, the assumption has been of a 2015 built-out of 0 and for the developments to be completed by 2021.
- 3.15 This information supersedes that outlined in the planning documents, for example with regards to the Kingsway Quarter and Lime Street developments.

#### **BBC Growth beyond 2021**

- 3.16 BBC are currently preparing a new version of the Local Plan, outlining the level and location of growth to 2032. The scale and locations of development have not yet been determined however a number of assumptions have been made to enable an indication of likely future growth to be included in the model.
- 3.17 These are presented in the "BBC growth beyond 2021" section of **Appendix A**. The information has been supplied by BBC.

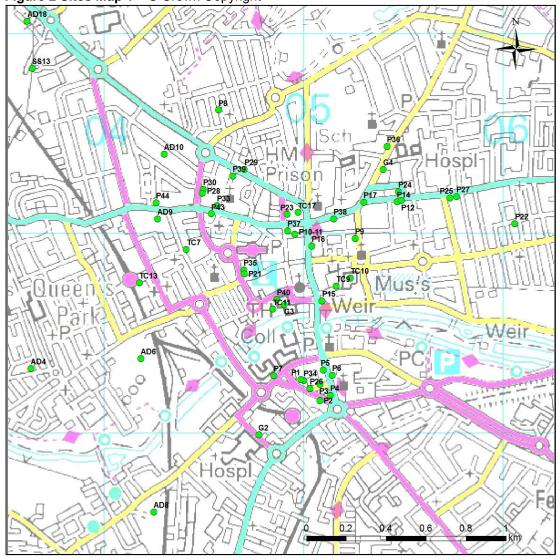

#### **Strategic Sites for Business**

- 3.18 BBC has recently published a prospectus inviting businesses to Bedford. It includes information regarding the existing and upcoming employment areas with spare capacity, including the amount of jobs which will be created.
- 3.19 The assumption made for build-out of these sites is they will all come live in 2021, unless they supersede other sites for which we have a 2015 build-out.

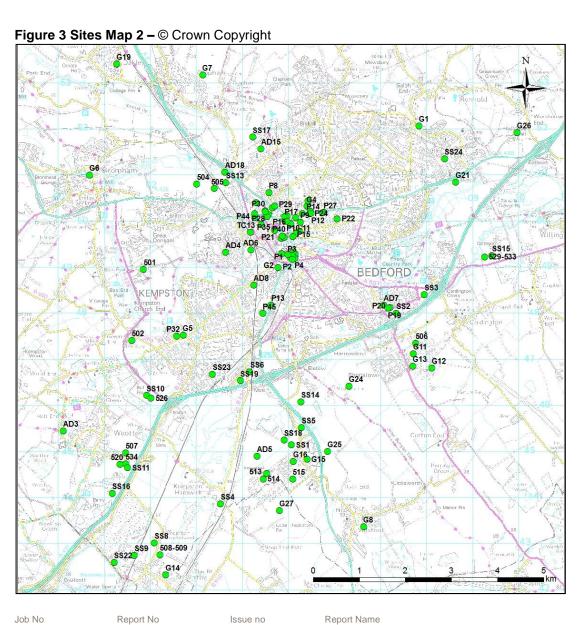

#### **Sites**

3.20 The figures overleaf map the sites that have been identified in the documents discussed above. The maps are provided at three different scales due to the varying density of planned developments within the borough.

	AD4	Old Ford End Road
	AD6	Ford End Road
	AD8	Dallas Road, Kempston
	AD9	St Bede's School

Biddenham Loop

## **Scenario Assumptions**

- 3.21 Where multiple sources present information for the same site, only the most up-to-date has been taken into account.
- 3.22 The site location is a key aspect to assess the transport impact of a development. The BBC area has been separated into a number of zones, outlined in the figures in **Appendix B**, and each development has been allocated to one of these zones. Certain zones have been designated as "Town Centre and Edge of Town Centre", whilst others have been classified as "Edge of Town and Suburban", as outlined in **Appendix B**.
- 3.23 In order to quantify the number of trips for the other developments, trip rates have to be assumed for each land use. This trip rate information is discussed in **Appendix C**. Different trip rates have been used for town centre / edge of town centre locations and edge of town / suburban locations. To simulate a worst-case scenario, all employment has been assumed to fall within the B1 office land use, and all retail within the A1 food superstore category.
- 3.24 For several sites the only information available is the total area of the sites, which has been converted to gross floor area (GFA) as discussed in **Appendix C**. Where the documentation includes the expected number of jobs created by a site (for example the Strategic Sites Brochure), this information has been converted to GFA as discussed in **Appendix C**.
- 3.25 For those developments that are land use conversions and for which information has been provided regarding the current and previous land use (**Appendix A**), the net change in trips has been taken into account, as discussed in **Appendix C** and shown in **Appendix D**.

### Results

3.26 The estimated growth based on planned developments is summarised in **Table 3.1** below, where the % growth is with respect to the 89,500 vehicles in the 2011 base year model. A full list of trips generated by each of the sites in the each scenario is included in **Appendix D**.

**Table 3.1 Bedford Planned Developments Trip Growth Rates** 

Period	AM Peak (%)	PM Peak (%)
2011 - 2015	3.16	3.38
2011 - 2021	15.9	14.6
2011 - 2032	29.8	26.3

TRICS (v 7.1.2)

# **Trip Distribution for Development Areas**

#### **Trip Distribution**

3.27 The trip distribution for the developments has been based on the validated base model travel patterns. The percentage change in planning data terms for each zone has been applied to the trip matrices, with the change in households being a proxy for trip origins and the change in jobs being a proxy for destinations.

#### **Constraining to TEMPRO** 4

- 4.1 The final stage of the forecasting was to constrain the trip totals to those output by TEMPRO. This is required to allow for changes in car ownership to be reflected within the forecasts and to ensure compatibility with nationally derived forecasts. This compatibility is recommended as future work leading towards business case submissions will require compatibility as a pre-requisite for bid submission.
- 4.2 The total levels of housing and jobs for the study area have been input into the TEMPRO program as an alternative planning scenario, with the output providing a total for future year trips by time period, journey purpose and mode for this level of development.
- 4.3 These targets have then been input as control totals into a doubly constrained trip factoring process that will seek to constrain the combination of the factored base year trip matrices and development area trip matrices to the total trips as output from TEMPRO. The outputs will be journey purpose, mode and time period specific origin destination matrices that can be input into the Bedford transport model to enable the inclusion of the effects of changes in travel costs to be incorporated into the forecasts.

#### **Growth Rates**

#### Methodology

- 4.4 The forecast models have been constrained to TEMPRO growth factors based on the NTM AF09 dataset. The following criteria have been adopted:
  - Area definition: GB, East, Bedfordshire, Bedford
  - Transport mode: car driver
  - Trip end type: origin / destination
  - Base year: 2011
- 4.5 HGV growth and external to external trip growth are based on the DfT's Road Traffic Forecasts spreadsheet NTM13. The "English regional plus Welsh traffic growth and speed forecasts (kilometres)" spreadsheet has been interrogated for Area Type and Road Type growth factors within East of England.

#### **TEMPRO Results**

4.6 Table 4.1, Table 4.2 and Table 4.3 below present the growth rate to 2015, 2021 and 2032 for the various road types within Bedford. It should be noted that no data is available for urban motorways, as there are none in Bedford.

Table 4.1 Bedford TEMPRO Growth Rates; 2011 - 2015

Minor	13.0	13.8	13.2

TEMPRO (dataset version 62, NTM AF09)

- 4.7 A comparison between planned development growth rates (**Table 3.1**) and TEMPRO growth rates (**Table 4.1**, **Table 4.2** and **Table 4.3**) can be drawn.
- 4.8 Whilst the 2015 scenario in **Table 3.1** only takes into account committed developments, the future models include planned sites, which may or may not be developed out. This partly explains why the planned development growth matches the TEMPRO growth for 2015 whilst it overestimates the 2021 and 2032 growth.
- 4.9 Furthermore, a TRICS-based estimate of future trips leads to instances of double counting vehicles leaving new residential sites and arriving at new employment sites. Lastly, factors such as changing residential density as a result of people relocating to new developments are not taken into account. The trips from the new residential sites may be people that have moved within Bedford as opposed to new residents.
- 4.10 In light of this, the growth from planned developments has been constrained to TEMPRO growth, and the TRICS information has been used to distribute the additional trips by zone and time of the day.
- 4.11 This is in line with Webtag unit M4 Forecasting and Uncertainty paragraph 7.3.2, which states that 
   whilst the reference forecast should take into account the impact of national and local changes 
  (e.g. housing developments) on travel demand overall demand should be constrained to the 
  Department's projections (trip end growth factors from the NTEM dataset). Local changes influence 
  the spatial distribution.

#### **HGV Growth**

4.12 HGVs are constrained by factors derived from the DfT's Road Traffic Forecasts NTM13 spreadsheet *All Outputs by Area Type* in the East of England. The dataset was interrogated for rigid and artic vehicle growth between 2010 and 2035, to interpolate the growth factors for the three scenarios (2015, 2021 and 2032), presented in **Table 4.4** below. Growth is based on a 2011 baseline.

Table 4.4 Road Transport Forecasts by Area Type (all areas within East of England)

Vehicle Type	2015	2021	2032
HGV (Rigid & Artic)	-2.4%	10.0%	21.2%

RTF 2013, NTM13

#### **External to External Growth**

The growth of external trips is based on the DfT's Road Traffic Forecasts *NTM13 spreadsheet All Outputs by Road Type* in the East of England. The dataset was interrogated for growth of all traffic in the HA InterUrban roads between 2010 and 2035. Interpolation was then used to determine the growth factors presented in **Error! Reference source not found.** below

Table 4.5 Road Transport Forecasts by Road Type (HA InterUrban within East of England)

Vehicle Type	2015	2021	2032
All traffic	0.44%	6.4%	31.0%

RTF 2013, NTM13

## 5 Forecast Models Network Coding

- 5.1 The models include of all currently committed schemes that have identified funding or are conditioned through the planning system. This network has updated generalised costs using values of time for the forecast year coded into it and represents the supply side of the **Do Minimum** scenario.
- 5.2 On to this Do Minimum network, proposed schemes that form part of the options have been coded to produce the supply networks for the future year **Do Minimum** scenarios. The network coding task includes the coding of additional zones into the highway model.
- 5.3 The base year model has been re-run through to enable cost skims to be calculated for use in the trip distribution of these development areas. The results of the base year model have been unchanged as a result of these zones being included as no additional demands have been loaded into the model.
- A list of the committed highways schemes that have come online between 2011 and 2015 and have been included in the 2015 model is presented below.
  - 1. Western bypass;
  - 2. Improvements to Union Street roundabout;
  - 3. Signalisation and southern extension of Ampthill Road / West End junction;
  - 4. Improvements to the double roundabout at Bromham Road / Ashburnham Road, including the reduction in number of westbound lanes, to accommodate a cycle lane;
  - 5. New junction for Morissons on Ampthill Road;
  - 6. Lane reduction to the Goldington Road / Newham Avenue junction in southern and northern directions, to accommodate a toucan crossing;
  - 7. Eastbound lane reduction to Bromham Road / Greyfriars, to accommodate a cycle lane; and
  - 8. Eastbound lane reduction to the Cauldwell Street / St John's Street junction.
- For the future year models (2032 and 2021), the following scheme which was announced as part of the Government's Road Investment Plan has been included:
  - 9. An uninterrupted East-West A421/A428 route, through a grade-separated junction (flyover) at the Black Cat junction and a dual carriageway route heading east from the Black Cat (A421/A1) roundabout to Cambridge.
- It is worth noting that schemes 1 and 9 lie outside the VISSIM model boundary, and hence are only included in the Saturn model.

**Trip Rates** 

## **Trip Rates**

#### Introduction

This Appendix summarises the methodology used to generate generic trip rates to estimate the growth in vehicle trips due to the planned developments in Bedford.

#### Methodology

The trip rates have been generated using the industry standard trip generation tool, TRICS® (Trip Rate Information Computer System) database version 7.1.2.

The following criteria have been applied in formulating generic trip rates for Bedford:

- Multi-modal trip rates;
- England surveys only, excluding Greater London (unless otherwise stated);
- Surveys undertaken after 1 January 2006;
- Weekday surveys only; and
- Town Centre / Edge of Town Centre locations or Edge of Town / Suburban locations.

Generic trip rates have been calculated for the following land uses:

- C3 Residential (mix of houses / flats, privately owned / for rent);
- A1 Food Superstore;
- B1 Office;
- Hotel:
- Industrial Estate;
- Leisure Centre;
- Education (primary);
- Education (secondary);
- Retirement
- Primary Care; and
- Restaurant.

#### **Generic Trip Rates**

Trip rates for the standard network AM and PM peaks (08:00-09:00 and 17:00-18:00 respectively) have been formulated and are presented below.

The vehicle types included in TRICS for which trips rates have been calculated, include:

- Total vehicles;
- Public service vehicles (PSVs); and
- Other Goods Vehicles (OGVs).

TRICS (v 7.1.2)

<sup>\*</sup>Includes London sites

<sup>\*</sup>Includes London sites

#### Unit conversion

Given the quantum of several of the sites has been provided as either total site area or number of jobs, these must be converted to the unit of the TRICS trip rates. The table below presents the conversion ratios for each land use for which a conversion is required.

The ratios were determined from the TRICS database, using the same sites selected to generate the generic trip rates. In each case, the average ratio was determined excluding the top and bottom 15%.

**Table 6.3 Conversion Ratios** 

Land Use	Location	sqm GFA / sqm of Site	sqm GFA / employee	sqm GFA / bedroom
Office	Town Centre & Edge of Town Centre	1.715	14.05	
Office	Out of Town and Suburban	0.389	15.33	
Food Superstore	Town Centre & Edge of Town Centre	1.107		
Food Superstore	Out of Town and Suburban	0.257		
Primary School	Out of Town and Suburban	0.283		
Hotel	Out of Town and Suburban			38.69

TRICS (v 7.1.2)

#### **Net Impact**

Some planned developments are land use conversions as opposed to Greenfield developments. In most cases either the quantum or type of previous use is unknown, but for those developments for which both are known (**Appendix A**), the net impact of the conversion in terms of trip generation has been accounted for.

The trips associated with the previous land use have been calculated with the same trip rates as those used for the future use, and they are subtracted in the build-out associated with each development. For example, if an employment site will be converted to residential in 2021, in the 2021 and 2032 scenarios the employment trips have been subtracted from the future trips. The 2015 scenario will have a net impact of 0.

Given the magnitude and central location of the TC7 retail development, which will improve the retail offer of the town centre by increasing the retail area to 30,000sqm, the assumption made is that 50% of the trips associated with this development already exist (**Appendix A**). The 2021 and 2032 increase in trips associated with this development is thus as if only 15,000sqm of retail were added. This is considered to be a worst-case scenario, as most of these trips will be either relocated or linked, rather than new trips.

**Growth from Planned Developments**
